## SUPERSOFT

The SuperSoft technology, applied in innersoles, gives Unisa's shoes a series of technical features focused on providing the greatest possible comfort during its use.

SuperSoft means comfort. Thanks to its lightness and flexibility, it allows us to face long days on our shoes, avoiding the appearance of fatigue.

The composition of materials with which it is manufactured offers greater absorption of small impacts produced by walking, thus achieving greater care of our bones and joints.

Thanks to this technology and its materials, the innersole always returns to its original state, that is, it has memory and recovers its shape after adapting to each foot.

Finally, SuperSoft gives the footwear a greater degree of breathability, so that its use is perfectly compatible both in winter and summer.

## ECOLINO

A collection designed for a laid-back type of woman, a collection in which recycled materials really play the bigger role. What better way to dress our steps than with sustainable footwear. A beautiful and comfortable footwear of high quality, created thinking of the environment with the use of PET fabrics.
